ITF is an internationally recognised champion for oil and gas technology innovation whose key objectives are to identify technology needs, foster innovation, and facilitate development and implementation of new technologies. ITF acts as a conduit between technology innovators and the global oil and gas industry to work together on collaborative projects. ITF's industry led and demand driven process has been instrumental in the deployment of many innovative technologies into the oil and gas provinces around the world. ITF is a 'not for profit' organisation whose members comprise major global operators and service companies:
